## RHM 10

# Coriolis Mass Flow Meter for Batching/Filling and Accurate Measurement

General Flow Control / Additive Dosing / Mixing and Batching /  
Chemical Injection / Package and Container Filling / Hydrogen  
Dispensers for Trucks, Trains & Buses

## Features

- Typical measuring range up to 90 kg/min (198.42 lb/min)
- Pressure ratings up to 1379 bar (20000 psi)
- Temperature ratings from -196 to +350 °C (-320 to +662 °F) – extended on request
- Mass flow uncertainty down to 0.05 %
- Repeatability down to 0.05 %
- 4 kHz measurement updates and response time of less than 10 ms when used with RHE 40 Series transmitters
- Accurately measure flow rates down to 250 g/min
- The Rheonik **AnyPipeFit Commitment** provides custom process connection type and size flexibility on any meter to suit your existing plant, saving time and expense on installation costs
- Compact design with minimal pipeline footprint
- Approved for use in hazardous areas
- SS 304 Stainless steel enclosure, SS 316L optional
- Integral and remote transmitter versions available

## General Specification Overview

<b>Nominal Flow (<math>Q_{nom}</math>)*</b>	60 kg/min (132 lb/min)
<b>Maximum Flow (<math>Q_{max}</math>)*</b>	90 kg/min (198 lb/min)
<b>Typical Minimum Flow (<math>Q_{min}</math>)*</b>	0.25 kg/min (0.55 lb/min)
<b>Serial Tube / Single Path</b>	Flow rates $Q_{max}$ , $Q_{nom}$ and $Q_{min}$ for "serial" sensors will be 50 % of the above listed parallel/dual path version.
<b>Operating Temperature</b>	Fluid temperature range options cover from -196 °C to +350 °C (-320 °F to +662 °F) For integral transmitter versions please refer to transmitter datasheet
<b>Ambient Temperature</b>	-50 °C to +80 °C (-60 °F to +180 °F). High temperature version for oven installation up to +210 °C (+410 °F) available
<b>Pressure Ratings</b>	Up to 1379 bar / 20000 psi – dependent upon material
<b>Electrical Connection Sensor w/o Integral Transmitter</b>	M20 x 1.5 standard cable entry for JM, SM terminal box versions Optional entries available : ½" NPT or M25 x 1.5 (only for SM) or ¾" NPT (only for SM) M16 x 1.5 standard cable entry for PM terminal box version Max. cable length to remote RHE transmitter 100 m/330 ft
<b>Sensor Enclosure Materials</b>	Stainless steel 304 (standard), SS 316L (optional) Coated aluminum terminal box, SS 316L terminal box (optional)
<b>Enclosure Type</b>	Protection class IP66 (IP66 is mostly equivalent to NEMA 4X) Optionally IP66-IP67 (IP67 declared by manufacturer, IP67 is mostly equivalent to NEMA 6)
<b>Wetted Materials</b>	Flow tubes SS 316L, SuperDuplex, Sandvik HP160© or Alloy C22 Manifolds SS 316L, seals FKM, FFKM, FVMQ, EPDM Standard flanges SS 316Ti, other connections SS 316L Additional/customer specific materials available upon request
<b>Process Connections</b>	Nearly any - The Rheonik <b>AnyPipeFit Commitment</b> covers a wide range of process connections types and sizes. Consult factory for types/sizes not listed in this data sheet on the Mechanical Construction pages
<b>Pressure Rating Compliance</b>	PED 2014/68/EU Article 4, Section 3 (SEP)
<b>Certifications and Approvals</b>	ATEX / IECEx Approvals Zone 0, 1, 2 (see page 20) North American Approvals Cl. I, Div. 1, 2, Gr. A, B, C, D, Zone 0, 1, 2 OIML, MID custody transfer approval American Bureau of Shipping (ABS) DNV approval for marine applications
<b>Testing and Inspection</b>	All sensors are hydro tested, calibrated and supplied with a traceable calibration certificate. Customized calibration and testing services are available
<b>Project Documentation and QA, Services</b>	Rheonik offers a full set of services for large and complex engineering projects. Typical services offered are, but not limited to: <ul style="list-style-type: none"> <li>• Certificates of origin and conformity, mill certificates</li> <li>• Data books including WPS-WPQR, WPQ, NDT, test &amp; quality plans, functional testing, calibration procedures, customized packing, factory acceptance etc.</li> <li>• Painting to project specification</li> <li>• Start up and commissioning services on/offshore</li> </ul>
<b>Options</b>	Customization services for machine integration. Consult factory

\* At  $Q_{nom}$  pressure drop across a parallel tube sensor will be approximately 2.2 bar (32 psi) for H<sub>2</sub>O. Sensors can be operated at higher flow rates up to  $Q_{max}$  but pressure drop will be higher. Typical Minimum Flow  $Q_{min}$  is the recommended lowest flow rate for an accurate measurement. Sensors will measure flow rates lower than  $Q_{min}$  but uncertainty will increase beyond 1% of rate.

The flow rate specifications above relate to standard pressure, parallel tube, manifold sensor versions. Models with higher pressure ratings have increased wall thickness and will have higher pressure drops.

## Calibration Options

Order Code	General Accuracy Calibration
A	Standard - 0.20 % Uncertainty
B	Premium - 0.15 % Uncertainty

Order Code	High Accuracy Calibration
G	Premium Plus - 0.10 % Uncertainty
U	Ultimate - 0.05 % Uncertainty <i>Requires RHE 40 Series transmitter</i>

Order Code	Focused Calibration
1	0.10 % Low Flow Calibration* <i>Requires RHE 40 Series transmitter</i>
X	Customized Calibration** Consult factory

\* Low flow calibration focuses on the range from  $\frac{1}{2} * Q_{nom}$  downwards to lower flow rates than on other calibrations. Often used for low pressure gas or very viscous liquids

\*\* Customized calibration uses specific calibration points according to customer requirements

**Reference conditions:**  
18-24°C Water @ 1-3 bar

Order Code	Density Calibration / Performance (Liquid)
N	No Density Calibration
S	Standard $\pm$ 0.001 kg/l Uncertainty
D	Enhanced $\pm$ 0.0005 kg/l Uncertainty Requires High Accuracy or Focused Calibration Option

### Uncertainties and flow measurement turn-down

The turn down capability from  $Q_{nom}$  of the flow sensor is driven mainly by its zero point stability. At the very low end of the measuring range the uncertainty (u) is dominated by zero point stability.

- Zero point stability of a standard sensor with General Accuracy Calibration is:  $\pm$  0.00246 kg/min (0.00542 lbs/min).
- Zero point stability of a Gold Line sensor with High Accuracy or Focused Calibration is 0.0012 kg/min (0.00265 lbs/min).
- For flow  $Q \geq$  ZP stability / (Base Calibration uncertainty/100)  $\rightarrow$  u = calibration uncertainty
- For flow  $Q <$  ZP stability / (Base Calibration uncertainty/100)  $\rightarrow$  u = (zero stability/Q) \* 100

### Uncertainties from environmental and process conditions

If sensors are not zeroed at operating conditions, minor additional uncertainties can arise from elevated temperatures and pressures:

- $\pm$ 0.000556 % of maximum flow per °C
- $\pm$ 0.000333 % of maximum flow per bar.

Process temperature effect on density:

- Additional uncertainty of  $\pm$ 0.000122 g/cm<sup>3</sup> per °C difference from calibration temperature with standard density calibration
- Additional uncertainty of  $\pm$ 0.000036 g/cm<sup>3</sup> per °C difference from calibration temperature with enhanced density calibration.
- This effect can be mitigated by a simple field density adjustment at operating conditions.

Process pressure effect on mass flow:

The effect of pressure on flow measurement is 0.0001 % of rate per bar. Compensation is possible by pressure sensor input (analog input or digital write) or manual value entry into the transmitter.

Process pressure effect on density:

- The effect of pressure on density measurement is 0.000075 g/cm<sup>3</sup> per bar. Compensation is possible by pressure sensor input (analog input or digital write) or manual value entry into the transmitter.

*Premium Plus, Ultimate, Low Flow and Enhanced Density Calibration are only available in SS316 material, P1 lower pressure and N1 temperature range.*

*Applying Premium Plus calibration to higher pressure, special materials and/or non-standard temperature models will show higher zero uncertainties (up to 3 times higher than standard sensor).*

### Flow Measurement Repeatability

Standard Sensors  $\pm$  0.1 % of rate  
Gold Line Sensors  $\pm$  0.05 % of rate

### Temperature Measurement

Better than  $\pm$  1 °C

## Pressure Drop

Every Coriolis flow sensor generates pressure drop across its inlet and outlet when in use. The amount of pressure drop generated is mainly a function of the flow velocity within its tubes and the flowing viscosity of the stream.

0 – 90 kg/min water, sensor with P1 pressure rating. Higher viscosities create higher pressure drop

## Measurement Tube Materials and Pressure Ratings

The maximum pressure ( $p_{max}$ ) of a sensor is determined by its lowest rated part. The lowest rated part can be either the measurement tube ( $p_{max}$  see table to the right), the connection block/manifold ( $p_{max}$  indicated in the Mechanical Construction section) or the process connection (for  $p_{max}$  see published standards or manufacturer information).

**Note:**

The material of the connection block/manifold is always SS 316L.

The material of the process connection of sealless sensor versions is usually the same as the measurement loops, however, could be different in special cases on PFT.

Order Code	Material	50°C / 122°F	120°C / 248°F	210°C / 410°F	350°C / 662°F
P1	SS 316L (standard)	208 3017	185 2683	156 2263	133 1929
P1	Alloy C22	341 4945	303 4394	258 3741	214 3103
P2	SuperDuplex*	481 6976	448 6498	402 5831	N/A
P2	Sandvik HP160®	600 8702	540 7832	490 7107	N/A
P3	SuperDuplex*	753 10921	701 10167	629 9123	N/A
P3	Sandvik HP160®	1010 14649	970 14069	650 9472	N/A
P4	SuperDuplex*	1379 20000	1289 18695	1156 16766	N/A

\* Note minimum operating temperature for SuperDuplex stainless steel is -40 °C

Units: bar / psi

### Other Materials

Other wetted materials may be possible for chemical compatibility, lower pressure drop, abrasion allowance, other application specific requirements. Rheonik can provide nearly any material for the wetted parts. Contact factory with specification for assessment and availability.

## Mechanical Construction

Sensors are manufactured with two internal measurement tubes arranged side by side. In parallel or dual measurement path sensors (order code Pxx), these tubes are connected in parallel, and the flowing fluid is split equally between them. In serial or single measurement path sensors (order code Sxx), the internal tubes are connected end to end, creating a single path through which all fluid flows. Manifold designs have a removable inlet/outlet block/manifold and utilize seals between the manifold and sensor body. In sealless designs, the measurement tubes are continuous between the process connections and do not have seals. Manifold designs typically offer shorter delivery lead times and may have a lower pressure drop than sealless designs for the same flow rate.

### Note

All dimensions in the following pages are for standard design products. For customization of face-to-face length and/or process connection types other than the ones listed on the following page, please consult factory. Note that larger diameter flange process connections are always possible. The tolerance of the process connections is  $\pm 2$  mm.

### Manifold design with threaded process connections

Parallel tube / dual measurement path

Order Codes: PM0/PH0

PM0 / PH0 Process Connection	Dim. L mm / in	Order Code
Female Thread G 1/2" - PM0	80 / 3.15	G1
Female Thread 1/2" NPT- PM0	80 / 3.15	N1
Autoclave 9/16" MP - 13/16" - 16 UNF Female Thread (only PH0)	90 / 3.54	P2

PM0 / PH0 Dimensions	mm	in
A	189	7.44
B	58	2.28
H1 (PM0, PH0)	305	12.01
H2	286	11.26
H3	265	10.43
W	see page 15	

#### Manifold Pressure Ratings @ 120 °C / 248 °F

PM0 – 700 bar / 10150 psi

PH0 – 1220 bar / 17695 psi (20000 psi @ 50 °C / 122 °F)

#### Weights and Shipping Dimensions

- Weight for sensor with threads:  
~7 kg/15.4 lb
- Shipping carton size: ~50 x 50 x 50 cm (20 x 20 x 20 in)
- Gross weight with RHE28, packaging:  
~13 kg/28.7 lb

#### Material of Manifold and Seals (Wetted Part)

The connection block/manifold is made of SS316L. Depending upon sensor temperature range, sensors are supplied with the following seal types as standard. For alternative seal options (e.g., FFKM seals for N1) please see Options Codes on page 19. Other seals on request.

Temperature Range	PM0	PH0
N1	FKM	FKM
NA	FVMQ	FVMQ
E2	FFKM*	n/a

\*FFKM seals minimum temperature is -20 °C/-4 °F;  $p_{max} = 700 \text{ bar}$

### Manifold design with threaded process connections

Serial tube / single measurement path

Order Codes: SM0

SMO Process Connection	Dim. L mm / in	Order Code

B1 (C2)	55	2.17
B2 (C2)	88	3.46
H1 (C2)	234	9.21
B1 (SM)	13	0.51
B2 (SM)	113	4.45
H1 (SM)	192	7.56

### Weights and Shipping Dimensions

- Weight for sensor with threads: ~7.5 kg/16.5 lb
- Shipping carton size: ~50 x 50 x 50 cm (20 x 20 x 20 in)
- Gross weight with RHE28, packaging: ~13.5 kg/29.8 lb

### Material and pressure rating of process connection:

Generally, the material of the connection is identical to the measurement tube material selected. Exception may occur, e.g., Swagelok is always SS316.

The pressure rating for G thread connections is 540bar@120°C, 700bar@120°C for NPT.

PMT Process Connection	Dim. A mm / in	Order Code
Autoclave 9/16" MP - 13/16" - 16 UN female thread	189 / 7.44	P2
Autoclave 3/4" MP - 3/4" - 14 NPSM female thread	189 / 7.44	P3

PMT Dimensions	mm	in
A	189	7.44
B	58	2.28
H1 (P2 Autoclave)	265	10.43
H1 (P3 Autoclave)	274	10.79
H2 (P2 Autoclave)	253	9.96
H2 (P3 Autoclave)	256	10.08
H3	240	9.45

### Weights and Shipping Dimensions

- Weight for sensor with threads:  
~7.5 kg/16.5 lb
- Shipping carton size: ~50 x 50 x 50 cm  
(20 x 20 x 20 in)
- Gross weight with RHE28, packaging:  
~13.5 kg/29.8 lb

## Electrical Connection Options To Transmitters

Any Rheonik Mass Flow Transmitter model can be combined with any Rheonik Mass Flow Sensor to provide an overall mass flow measurement system to suit any requirement. Rheonik Coriolis transmitters are available in both integral and remote mounting styles. A range of connection options is available to suit all application requirements.

Order Code: JM  
 (J5 with RHE45 Integral Transmitter)  
 Standard Coated Aluminum Terminal Box

Order Code: PM  
 Compact Coated Aluminum Terminal Box

Order Code: SM  
 Terminal Box and Entire Enclosure in SS 316

Order Code: TM  
 Integral PTFE Cable (No Terminal Box). Std. Length 2 m. Can be extended up to max 10 m

Connection Option	Dimension	mm	in
JM, J5 Terminal Box	L x H x B	125 x 80 x 57	4.92 x 3.15 x 2.24
PM Compact Terminal Box	L x H x B	98 x 64 x 34	3.86 x 2.52 x 1.34
SM SS316 Terminal Box	L x H x B	100 x 100 x 61	3.94 x 3.94 x 2.40
TM Integral PTFE Cable	W	41	1.61
JM, J5, PM, SM with Temperature Range N1, NA	W	2	0.08
JM, J5, PM, SM with Temperature Range E2, E3	W	100	3.94

JM, SM Terminal boxes are supplied with an M20 x 1.5 cable entry, optional entries available – see Separately Ordered Options, page 19  
 PM Compact Terminal boxes are supplied with an M16 x 1.5 cable entry  
 For details of the integral transmitter used with option J5, please see the RHE45 datasheet

## Installation/Mounting Schemes

Recommended for sensitive, low flow installations (order codes see page 19 "Accessories")

### Pipe Support Brackets

### Sensor Mounting Holes (backside of the sensor)

### Thread dimensions ground plate PF0/PFT

### Wall Mounting Bracket Accessory

### Floor Mounting "Foot" Bracket Accessory

## Electrical Connection to Transmitter Compatibility

Electrical connection option selections are compatible with the transmitter range according to the following table. Note that economical blind front versions of some transmitters are available where displays and keypads are not required. The wide range of Rheonik sensors and transmitters provide tremendous options for system designers and end users alike.

Sensor Connection Options							
	Order Code	JM	SM	TM	J5	C2	PM
	RHE 21	✓	✓	✓	—	—	✓
	RHE 26	✓	✓	✓	—	—	✓
	RHE 27	✓	✓	✓	—	—	✓
	RHE 28	✓	✓	✓	—	—	✓
	RHE 42	✓	✓	✓	—	✓	✓
	RHE 45	—	—	—	✓	—	—
	RHE 46	✓	✓	✓	—	—	✓

## Options Codes

Order Code	
NN	No options selected
T1	Terminal box with cable entry upwards/gas installation
T0	Set-off terminal box for N1, NA temperature range (included in E2, E3)
FO	FVMQ seals for manifolds instead of standard seals - <i>recommended for frequent use &lt; 0 °C</i>
FK	FFKM* seals for manifolds instead of standard seals - <i>high chemical resistance, <math>p_{max} = 700</math> bar</i>
EP	EPDM** seals for manifolds instead of standard seals - <i>recommended for refrigerants</i>

\*FFKM seals minimum temperature is  $-20^{\circ}\text{C}$  /  $-4^{\circ}\text{F}$

EPDM seals only for N1, NA temperature range ( $-50 - +120^{\circ}\text{C}$ ), only for p1, p2 pressure range, only \_M0 construction type

List multiple options in the sensor part number in the same order as the above list

## Manufacturing Instructions

Order Code	
N	No additional manufacturing instructions
F	Removal of rest water from calibration with compressed air
7	Upgrade to dual rating IP66/67 - <i>only with electrical connection SM</i>
O	Special Cleaning, water and fat free
S	Sea-worthy packing

List multiple options in the sensor part number in the same order as the above list

## Options

Order Code ORHM-...	
E1	Terminal box prepared for ½" NPT cable entry
E2	Terminal box prepared for M25x1.5 cable entry ( <i>only with electrical connection SM</i> )
E3	Terminal box prepared for ¾" NPT cable entry ( <i>only with electrical connection SM</i> )
E5	Terminal box prepared for M20 x 1.5 cable entry in SS316 ( <i>only with electrical connection SM</i> )
E6	Terminal box prepared for ½" NPT cable entry in SS316 ( <i>only with electrical connection SM</i> )
TP	Separate TAG Plate in Stainless Steel ( <i>TAG information only</i> )
TC	Type Label in Stainless Steel ( <i>TAG and all other label information</i> )

Standard cable entry on JM, SM terminal box is M20 x 1.5. Cable entry on PM terminal box is always M16 x 1.5

## Accessories

Order Code ARHM06/10-	
M	Wall mounting bracket - <i>highly recommended for sensitive, low flow installations</i>
MF	Floor mounting bracket

## Hazardous Area Certifications

Order Code	Zone / Division	Approval	Labeling
A2	Zone 2	ATEX IECEX	⊕ II 3G Ex ec IIC T6...T1 Gc Ex ec IIC T6...T1 Gc
A1	Zone 1	ATEX IECEX	⊕ II 2G Ex ib IIC T6...T1 Gb Ex ib IIC T6...T1 Gb
A0	Zone 0	ATEX IECEX	⊕ II 1G Ex ia IIC T6...T1 Ga Ex ia IIC T6...T1 Ga
C2	Zone 2	USA/Canada	Class I, Zone 2, AEx nA IIC T6...T1 Gc
C0	Div 1, Zone 0	USA/Canada	Class I, Div 1, Groups A, B, C and D T6...T1; Class I, Zone 0, AEx ia IIC T6...T1 Ga

## About Rheonik

Rheonik has but one single purpose: to design and manufacture the very best Coriolis meters available.

Our research and engineering resources are dedicated to finding new and better ways to provide cost effective accurate mass flow solutions that provide value to our customers. Our manufacturing group care for each and every meter we produce from raw materials all the way to shipping, and our service and support group are available to help you specify, integrate, start-up and maintain every Rheonik meter you have in service. Whether you own just one meter or have hundreds, you will never be just another customer to us. You are our valued business partner.

Need a specific configuration for your plant? Don't compromise with a "standard" product from elsewhere that will add extra cost to your installation. If we can't configure it from our extensive and versatile product range, our exclusive **AnyPipeFit Commitment** can have your flow sensor customized with any size/type of process connection and face to face dimension you need.

No matter what control system you use as the backbone in your enterprise, with our **AnyInterface Commitment**, you can be sure that connection and communication will not be a problem. Alongside a wide variety of discrete analog and digital signal connections, we can also provide just about any network/bus interface available (for example: HART, ProfibusDP, ProfiNet, EtherCAT, PowerLink, EtherNet/IP, CAN, ....) with our RHE 40 Series family of transmitters. Rheonik RHE 40 Series transmitters can connect to your system – no headache and no conversion needed.
