# **RHM 60**

# Coriolis Mass Flow Meter With Uncompromising Performance

Supplied by

247cble.com

# RHEONIK.

# RHM 60 Coriolis Mass Flow Meter With uncompromising Performance

Terminal Transfer / Plant Balance / Asphalt, Bitumen and other High Temperature Fluids / Mixing and Batching / Reactor Charging / Barge, Ship, Rail Car and Truck Filing

## **Features**

- Typical measuring range up to 3000 kg/min (6613.87 lb/min)
- Pressure ratings up to 490 bar (7107 psi)
- Temperature ratings from -196 to +350 °C (-320 to +662 °F) extended on request
- Mass flow uncertainty down to 0.1%
- Repeatability down to 0.05 %
- 4 kHz measurement updates and response time of less than 10 ms when used with RHE 40 Series transmitters
- Accurately measure flow rates down to 30 kg/min
- The Rheonik **AnyPipeFit Commitment** provides custom process connection type and size flexibility on any meter to suit your existing plant, saving time and expense on installation costs
- Approved for use in hazardous areas
- SS 304 Stainless steel enclosure, SS 316 optional
- Integral and remote transmitter versions available

# **General Specification Overview**

Nominal Flow (Q <sub>mem</sub> )*         2500 kg/min (5512 lb/min)           Maximum Flow (Q <sub>mem</sub> )*         3000 kg/min (6614 lb/min)           Typical Minimum Flow (Q <sub>min</sub> )*         30 kg/min (6614 lb/min)           Operating Temperature         150 kg/min (66 lb/min)           Ambient Temperature         -50 °C to +80 °C (-60 °F to +180 °F) (standard)           Pressure Ratings         Up to 490 bar / 7107 psi - dependent upon material           Electrical Connection Sensor w/o Integral Transmitter         M20 x 1.5 standard cable entry for JM. The flow rate specifications above relate to standard pressure, parallel tube, manifold sensor versions. Models with higher pressure ratings have increased wall thickness and will have higher pressure drops.

<sup>\*</sup> At Qnom pressure drop across a parallel tube sensor will be approximately 0.5 bar (7 psi) for H20. Sensors can be operated at higher flow rates up to Qmax but pressure drop will be higher. Typical Minimum Flow Qmin is the recommended lowest flow rate for an accurate measurement. Sensors will measure flow rates lower than Qmin but uncertainty will increase beyond 1% of rate.

## **Calibration Options**

#### Standard and Premium Calibration

A

0.20 % Uncertainty

Requires RHE 20 Series transmitter. All others 0.5 %

В

0.15 % Uncertainty

Requires RHE 20 Series transmitter or higher

#### **Premium Plus and Ultimate Calibration**

G

0.10 % Uncertainty

Requires RHE 20 Series transmitter or higher

#### **Low Flow and Customized Calibration**

1

0.10 % Low Flow Focused Calibration\*

Requires RHE 40 Series transmitter

Х

S

**Customized Calibration\*\*** 

Consult factory

\* Low flow calibration focuses on the range from Q<sub>nom</sub>/2 downwards to lower flow rates than on other calibrations. Often used for low pressure gas or very viscous liquids \*\* Customized calibration uses specific calibration points according to customer requirements

#### Uncertainties and flow measurement turn-down

The turn down capability from Qnom of the flow sensor is driven mainly by its zero point stability. At the very low end of the measuring range the uncertainty (u) is dominated by the zero point stability. The zero stability of a standard sensor is: 0.30 kg/min (0.66 lbs/min). Zero point stability of a Gold Line sensor is 0.27 kg/min (0.60 lbs/min).

For flow Q  $\geq$  ZP stability / (Base Calibration uncertainty/100)  $\rightarrow$  u = calibration uncertainty For flow Q < ZP stability / (Base Calibration uncertainty/100)  $\rightarrow$  u = (zero stability/Q) \* 100

# Uncertainties from environmental and process conditions

- If sensors are not zeroed at operating conditions, minor additional uncertainties can arise from elevated temperatures and pressures: ± 0.000815 % of maximum flow per °C and ±0.001083 % of maximum flow per bar.
- Process temperature effect on density: additional uncertainty of ±0.000106 g/cm³ per °C difference from calibration temperature with standard density calibration and of ±0.000009 g/cm³ per °C difference from calibration temperature with enhanced density calibration. This effect can be mitigated by a simple field density adjustment at operating conditions.
- Process pressure effect on mass flow: The effect of pressure on flow measurement is 0.053 % of rate per bar. Compensation is possible by pressure sensor input (analog input or digital write) or manual value entry into the transmitter.
- Process pressure effect on density: The effect of pressure on density measurement is 0.000024 g/cm³ per bar. Compensation is possible by pressure sensor input (analog input or digital write) or manual value entry into the transmitter.

Premium Plus, Low Flow and Enhanced Density Calibration come with Gold Line sensors and are not available in all materials, pressure and temperature ranges.

Reference conditions:  $18-24\,^{\circ}$  C Water @ 1-3 bar; Gas (Natural gas) 35-100 bar.

#### **Density Calibration / Performance (Liquid)**

No Live Density Calibration

Standard ± 0.001 kg/liter Uncertainty

D Enhanced ± 0.0005 kg/liter Uncertainty

#### Flow Measurement Repeatability

Standard Sensors ± 0.1% of rate Gold Line Sensors ± 0.05% of rate

#### **Temperature Measurement**

Better than ± 1 °C

#### **Pressure Drop**

Every Coriolis flow sensor generates pressure drop across its inlet and outlet when in use. The amount of pressure drop generated is mainly a function of the flow velocity within its tubes and the flowing viscosity of the stream.

0 – 3000 kg/min water, sensor with P1 pressure rating. Higher viscosities create higher pressure drop

# Measurement Tube Materials and Pressure Ratings

The maximum pressure  $(p_{max})$  of a sensor is determined by its lowest rated part. The lowest rated part can be either the measurement tube  $(p_{max}$  see table to the right), the connection block/manifold  $(p_{max}$  indicated in the mechanical construction section) or the process connection (for  $p_{max}$  see published standards or manufacturer information).

Material	Pressure	50°C /	120°C /	210°C /	350°C /
	Code	122°F	248°F	410°F	662°F
SS 316Ti	P1	<b>104</b>	<b>93</b>	<b>80</b>	<b>67</b>
(standard)		1508	1349	1160	972
SuperDuplex*	P2	<b>258</b> 3742	<b>242</b> 3510	<b>210</b> 3046	n/a
SuperDuplex*	Р3	<b>490</b> 7107	<b>430</b> 6237	<b>389</b> 5642	n/a

<sup>\*</sup> Note minimum operating temperature for SuperDuplex stainless steel is -40 °C

Units: bar / psi

#### **Other Materials**

Other wetted materials may be possible for chemical compatibility, lower pressure drop, abrasion allowance, other application specific requirements. Rheonik can provide nearly any material for the wetted parts. Contact factory with specification for assessment and availability.

#### **Mechanical Construction**

Sensors are manufactured with two internal measurement tubes arranged side by side. In parallel or dual path sensors, these tubes are connected in parallel and the flowing fluid is split equally between them. In sealless designs, the measurement tubes are continuous between the process connections and do not have seals.

#### Sealless design with flange connections

PF0: parallel / dual path

Process Connection PF0		Dim. L mm / in	Order Code
Flange ANSI 4" 150# RF/SF	PF0	725 / 28.54	A1
Flange ANSI 4" 300# RF/SF	PF0	725 / 28.54	A2

H1	1253	49.33
H2	1443	56.81
E	300	11.81
W	150	5.91

#### **Weights and Shipping Dimensions**

- Approx. weight with 4" 150# flanges: 235 kg / 518 lb
- Shipping in wooden crate as per ISPM 15, approx. 180 x 120 x 75 cm (71 x 48 x 30 in)
- Gross weight with 4" 150# flanges and RHE28 transmitter approx. 310 kg / 683 lb

#### Note

All dimensions are for standard products. For customization of face to face length and/or process connection types other than the ones listed on this page, please consult factory. Note that larger diameter flange process connections are always possible.

## **Transmitter Range**

Any Rheonik Mass Flow Transmitter model can be combined with any Rheonik Mass Flow Sensor to provide an overall mass flow measurement system to suit any requirement. Rheonik Coriolis Transmitters are available in versions specifically designed for process, industrial and 0EM applications. Economical blind front versions of some transmitters are available where displays and keypads are not required. The wide range of sensors and transmitters provide tremendous options for system designers and end users alike.

#### **About Rheonik**

Rheonik has but one single purpose: to design and manufacture the very best Coriolis meters available.

Our research and engineering resources are dedicated to finding new and better ways to provide cost effective accurate mass flow solutions that provide value to our customers. Our manufacturing group care for each and every meter we produce from raw materials all the way to shipping, and our service and support group are available to help you specify, integrate, start-up and maintain every Rheonik meter you have in service. Whether you own just one meter or have hundreds, you will never be just another customer to us. You are our valued business partner.

Need a specific configuration for your plant? Don't compromise with a "standard" product from elsewhere that will add extra cost to your installation. If we can't configure it from our extensive and versatile product range, our exclusive **AnyPipeFit Commitment** can have your flow sensor customized with any size/type of process connection and face to face dimension you need.

No matter what control system you use as the backbone in your enterprise, with our **AnyInterface Commitment**, you can be sure that connection and communication will not be a problem. Alongside a wide variety of discrete analog and digital signal connections, we can also provide just about any network/bus interface available (for example: HART, ProfibusDP, ProfiNet, EtherCAT, PowerLink, EtherNet/IP, CAN, ....) with our RHE 40 Series family of transmitters. Rheonik RHE 40 Series transmitters can connect to your system – no headache and no conversion needed.

Rheonik Messtechnik GmbH Rudolf-Diesel-Straße 5 D-85235 Odelzhausen Germany
